Thank you for purchasing the Hangar 9® ProSeal™ covering iron. This covering iron features a thermostatically controlled temperature maintenance system that actually monitors the heat and regulates power to maintain the temperature settings on the dial.

**IMPORTANT:** Consult the instructions provided with the film for suggested iron temperature settings. Always start with a lower setting than recommended and increase the heat slowly if necessary.

The ProSeal covering iron also features a non-stick coated ironing surface that allows the iron to glide over the covering material without scratching. This coating may produce a light smoke the first time the covering iron is used.

The specifically designed tip allows easy iron access between control surfaces and in hard-to-reach areas. A convenient aluminum stand is also included.

## SPECIFICATIONS

Max. Temp.	469°F (243°C)

## Operation:

Plug the ProSeal covering iron into a suitable 110–120V AC outlet. Adjust the temperature control dial on the covering iron to the recommended temperature for the covering you will be applying. The orange LED will illuminate on the covering iron indicating the iron is heating to the set temperature. Once at the set temperature, the green LED will illuminate, indicating the iron is ready to use. If the red LED is illuminated, the iron is above the set temperature and will stop heating until the set temperature has been achieved.

**TIP:** We recommend starting below the recommended temperature for your covering, then increasing the temperature as you work with the covering.

## Shoe replacement:

The shoe for your covering iron (HAN135S ProSeal Covering Iron Shoe) can be replaced if it becomes scratched or damaged. Use a #1 Phillips screwdriver to remove the four screws on the top of the covering iron. Carefully separate the shoe slightly from the main body of the iron and rotate the shoe to expose the two internal screws securing the heating element to the shoe. Use a #1 Phillips screwdriver to remove the two screws separating the heating element from the shoe. Install the new shoe by attaching the heating element to the shoe, then attaching the shoe back to the main body of the covering iron.
